# INTRODUCTION 17

Silver tea and coffee set by Jean Puiforcat for Elkington & Co, 1936-37: fine Art Deco.

Of course other tableware designers, such as the French master of Art Deco, Jean Puiforcat, Britain's Harold Stabler or Danish designers, Georg Jensen and Johan Rohde, worked directly in silver. But stainless steel changed the rules. Initially it was a shortage of silver during World War Two which forced manufacturers such as Jensen to use stainless steel, but very quickly the material became associated with the best of Scandinavian Modern design, and in the USA stainless-steel serving vessels developed a lightweight, sleek aesthetic which became very popular in the 1950s and 1960s.

In the 1970s, stainless steel suffered a loss of status as it became associated with cheap cafeterias. But in the 1980s, new ranges such as the Yamazaki Serving Collection of 1982 by

Coffee pot from the 1982 Yamazaki serving collection designed by Robert Welch: new direction for stainless-steel design.

British designer Robert Welch once more upgraded the image of the material as not only functional but elegant and pleasing to the eye.

## GLASS

A series of nineteenth-century key advances has informed the direction of twentieth-century glass tableware. In 1827 mould

# VERONA

**Stanley Tigerman and  
Margaret McCurry for  
Swid Powell 1987**

New York tableware maker  
Swid Powell invited leading  
American architects to  
decorate the company's wares  
for the Cityline series with

some success. Stanley  
Tigerman's Verona collection  
employs the theme of an  
aerial view of an ancient  
walled city. The use of  
designer names to decorate  
china marks its transition  
from utilitarian object to  
high-style possession.

# GLAZED STONEWARE POTTERY

**Janice Tchalenko  
for Dartington Pottery  
1986**

The British Studio Pottery  
look of the 1980s is  
epitomized by the bold colour  
and domestic shapes of  
Tchalenko's work. This  
collection, which features  
objects in a range of four  
patterns, has a handmade  
even though it is mass  
moulded by Dartington.  
world away from the tec  
artistry of Loewy or Grc  
for Rosenthal yet has its  
charm and integrity.

## Dollar dilemma hits U.S. buyers at Frankfurt Fair

(Continued from page 57)

products at the show. "I think everybody is really cautious in presenting new products. I didn't see much of anything I had not seen before. We weren't really inspired by anything," she said. Though the company did place some orders, Napoli explained that many of the items were previously shown at New York or Chicago shows.

While there may not have been an overwhelming number of new products, one emerging trend was the presence of bright colors in housewares such as pinks, lilacs, aquas and yellows — a strong contrast to the rose and slate blues seen in America. Conran's will experiment with the new colors but doubts they will become mainstream.

Although the low value of the dollar makes American-made products less expensive in Europe, several manufacturers and retailers were surprised by the low attendance of U.S. exhibitors at the show. A total of 15 U.S. tabletop and housewares manufacturers were listed as having exhibit space at the show, out of a total of 1,292.

"It's quite amazing how few American manufacturers were represented at a show which is the largest in the world and where all the foreign buyers from around the world congregate,"

said Edward Livingston, president of ASTA USA, an importer of the Fissler and ASTA lines from Germany, which has a retail outlet for housewares in New Jersey.

"I can't say we import less. We're bringing in about the same. The prices are horrendous but we do what we have to do," Livingston said. "I think a lot of

European companies who have offices in America are hurting, but the factories are trying to work to keep a presence in the market in the hopes that the currency situation will reverse itself as it has in the past."

At Villeroy & Boch, Lenny Weiss, divisional sales manager for the U.S., said "sales have not suffered in the American

market because affluent customers for high-end products are less likely to feel the pinch of higher prices." Furthermore, Villeroy and Boch has absorbed much of the currency fall, he explained, raising prices this season by 15 percent for the first time in two years.

Rosti USA, which also distributes Bodum, Hammarplast and several other housewares

lines, "singles out its winners, discusses prices closely with the parent factory in Denmark and buys currency in advance" in order to keep a competitive edge in the U.S., according to Tage Strom, vice president of marketing.

Rosti USA is also looking to distribute other European brands in the U.S.

## Accent on Design takes cue from British: Stylish teapots

Perhaps Americans are borrowing a tradition from the British these days, for there is an increasing trend toward fashionable and innovative objects for the teatime ritual.

Teakettles shown at the Accent on Design show ranged from Umbra's anodized, multi-colored fun kettles to Alessi's

sleek silver pieces, which look more like art objects than vessels from which to serve tea.

Swid Powell featured its gingerbread-style porcelain tea service — though the pieces were not instantly recognizable as a teakettle, creamer and sugar bowl.

Swid Powell showed its Tigerman McCurry Teaside service, which includes a kettle, creamer and sugar bowl and resembles a gingerbread village. Suggested retail is about \$280.

Äußerst anziehend waren die Schalen und Teller der Norwegerin Grete Prytz Kittelsen, die feingestalt und phantasievoll mit transparentem weiß- und graugetöntem Emaille auf unterliegenden, gefrästen Mustern dekoriert waren. Eine dazu beitragende Ursache, daß ihr Landsmann, der vielseitige Tias Eckhoff, 1953 den Lunningpreis erhielt, war das Silberbesteck „Cypress“ des Künstlers. Das klassisch elegante, funktionelle Eßbesteck wird immer noch von Georg Jensen in Kopenhagen hergestellt. Die

Schwedin Torun Bülow-Hübe ist wohl bekannt für ihre anatomisch körperfreundlichen Schmuckstücke. Das raffiniert Skulpturale gibt den Schmuckstücken einen ganz besonderen Anstrich. 1960 wurde dem finnischen Edelschmied Bertel Gardberg der Goldene Ehrenring für Goldschmiedekunst verliehen. Er hat die etwas strenge, zurückhaltende Attitüde seines Landes in seine Formsprache aufgenommen und seinen Korpusarbeiten Charakter und Schönheit gegeben. Sein ebenso berühmter Landsmann Björn

Weckström hat durch Einbezug der Oberflächenstruktur in seine Schmuckgestaltungen Originalität mit Gefühl für die Eigenart des Edelmetalls vereint. In einer späteren Periode arbeitet Weckström mit einer klaren, ausdrucksstarken skulpturalen Formgebung wie im Anhänger „Weltraumapfel“ von 1975.

Die Ausstellung im Nationalmuseum beweist, daß alle Preisträger innerhalb der verschiedenen kunsthandwerklichen und kunstindustriellen Fächer würdige Träger des Lunningpreises sind.

Arte Cuoio was started in 1980 because of Oscar Maschera and Claudia Serafini's passion for working with leather. The group has made a name for itself by constantly researching and working with architects on new items for a demanding market. This portfolio, clip board and envelope were designed by Bruno Morassutti. The fine quality leather and handcraft are complemented by the use of traditional techniques for keeping the leather, using vegetable tanning and aniline dyeing. The leather itself is imported from northern France and Germany. Details: +39 721 68688.

Teekanne aus Silber und Kupfer von Bettina Maier, 1985

Teekanne aus Silber von Andrew Putland, 1985

schmacksrichtungen innerhalb Europas. Verschiedene Generationen von Silberschmieden stellen nebeneinander aus, so daß eine Entwicklungsstudie an den Meistern und Schülern vollzogen werden kann. Aus dieser kristallisieren sich die verschiedenen Kunst- und Ausbildungszentren für Silberschmiede.

Das bereits in früher Antike zum täglichen Leben und dem Tempel gehörende Silbergerät ist von Krisen jeder Art abhängig gewesen. Auch in diesem Jahrhundert waren Höhen und Tiefen durch Wirtschaftsdepressionen und Kriege zu spüren. Nach dem Zweiten Weltkrieg gewann das Silberschmiedehandwerk an Bedeutung, zum Beispiel sind die Arbeiten von Andreas Moritz zu nennen, in seiner Nachfolge beteiligen sich bei der Silbertriennale Christina Weck und Wilfried Moll.

Erst mit dem Aufschwung der sechziger Jahre findet die Silberschmiedekunst eine deutliche Wiederbelebung. An der Fachhochschule Düsseldorf hat Friedrich Becker zweifellos wichtige Impulse für das Handwerk gegeben. Seine Kaffeekanne mit Tablett zeigt eine interessante Komposition von stereometrischen Elementen. Eine weitere Tendenz der Düsseldorfer Schule exemplifiziert die Mokkakanne von Sigrd Delius mit eleganter Linienführung und einem integrierten Griff aus transparentem Acrylglas. Aus diesem Kreis stammt Johannes Kuhn, der rot anodisiertes Aluminium zum Gestaltungsprinzip seines nahezu oval geformten Silbertablets verwendet. Werner Bünck, ebenfalls in Düsseldorf ausgebildet und heute Professor an der Fachhochschule in Hildesheim, hat wiederum eine neue Generation von Silberschmieden hervorgebracht, deren Charakteristikum klare fließende Grundformen mit geometrischen Ansätzen zur Akzentuierung sind. Die Weinkanne von Josef Lanta und die Teekanne von Andreas Decker seien hier als Beispiele dieser geschwungenen Linien genannt.

Eine weitere Silberschmiedeklasse ist an der Fachhochschule Köln, vertreten durch den Lehrer Wilhelm Nagel. Seine Teekanne setzt sich zu einer interessanten Konzeption aus geometrischen Körpern zusammen. Aus dem süddeutschen Raum ist die Akademie

der bildenden Künste in Berg mit Beispielen der Hössle beteiligt.

An der Akademie in München noch studierend ist Bott. Seine vier schlichten mit leicht variierter Dekor und interessanter Flächenbehandlung der zeugen von handwerklichen Können. Ganz eigen der Formgebung ist die Kanne von der he Worpsswede tätigen Maier.

Von der Argentum-Stockholm ist unter a Ohle Ohlsson zu erwähnen der mit seiner Teekanne spielerisch den orientierten Stil vertritt. Norweger Ragnar zeichnet sich aus durch blendend gemuldete Flächen, seine Flasche akzentuiert. Der aus Dänemark stammende Allan Scharff greift in der Position der Schnapskannengonale Linien auf. In dagegen werden vorwiegend weiche und runde Formen bevorzugt, die an den, der zahlreich verteilten Schüler der „Vakschothoven“ beobachtet können und an der Schöpfung der Teekanne Jan van Nouhuys, eine beauftragten der Schöpfung der Teekanne mit Hilfe von Goldsmiths' len viele Silberschmiede Großbritannien bei der Triennale aus; ein Zei die Teekanne von Putland. Die traditionelle Kugelform wird durch geometrisierende Elemente bereichert. Erwähnt ist ferner der Künstler Robert Birch mit religiösem Sinngehalt. Künstler deutet sein geometrische Umsetzung Trinitätsgedankens. Auch reich bietet die Ausstellung Beispiele des liturgischen Reichs von Josef Syn Florian Wagner, die teilweise aus Messing sind. Eine Innovation der Triennale 1986 ist die Verwendung von Messing durch Bettina Maier, der optischen Wirkung. Eben dieses Material bereits bei den Synodalen 16. und 17. Jahrhundert laubt und in späteren Jahren von der Kirche wieder Auftrag gegeben worden. Zur 8. Europäischen Silbertriennale ist ein Katalog mit Biographien zu den an der Silber Schmieden. Anna Beatriz Chadour

## White and black dominate products at Frankfurt fair

(Continued from preceding page) sler, U.S.A. "White also could be an in-between color until the next one comes out."

Hammarplast, for example, showed its new art thermos pitcher in white, black and chrome. It also showed a line of kitchen utensils in a stark modern matte black design. Last year, on the other hand, its collection was in a variety of pastels.

Bodum, while continuing with bright primary colors, introduced a new teapot called the Tea Ball in stainless steel. It also added a series of plastic trays in bright colors with black rubber handles, and plastic coasters with rubber bottoms and rubber tops to prevent the glass from slipping. Tage Strom, president of Bodum Inc., said rubber is a new material for the company, which is importing for European sale a line of matte black rubber kitchen utensils with matte black metal. It has not been decided whether the line will be sold in the U.S.

"Matte finishes are popular at the moment because they look less plasticity," Strom said. "Everyone is trying to dress plastic up. It also is practical because it is non-slip."

Other strong white and black lines included those of WMF, which exhibited a new line of enameled cookware in white with red stripes; Deagostini of Italy, which showed matte black trays and bowls, nickel trays with black trim and very flat clocks in white, black, red and yellow; and Alessi of Italy, which introduced matte

black oil and vinegar bottles.

There were several manufacturers showing lines in bright colors. Among these were Waechtersbach, which exhibited new dishes and serving pieces in green, aqua and rust as well as vases in speckled patterns. Vendor of Copenhagen exhibited vividly colored trays, bowls and espresso machines, and Garant Plast of Tastrup, Denmark, showed bright pastel bowls, trays, pitchers and storage containers. Dema Glass showed four new ranges in its Panache glassware.

Major product introductions included Fissler's design 90 line of square cookware in stainless steel; Leifheit's new fold-up box in corrugated polyurethane; Culinar-Ostivics' extended range of maple and pear wood bowls, storage containers and trays and new line of glassware with each stem the same height; Zyliss' new can opener that locks onto the can, Rosti's new electric clam opener and corkscrew that also can serve as a bottle opener, bottle closer and cork; and Biesse of Italy's split pitcher that can hold oil and vinegar at the same time.

In electronic products, the major trend was electronic kitchen and bathroom scales with detachable readouts, which were exhibited by Tefal, Terraillon and Soehnle. The scales included a talking, programmable bathroom scale with detachable readout and a programmable kitchen scale that can hold 150 different foods in its memory for analysis of calories, fats and proteins.

PAGE 46

Hammarplast showed art thermos pitchers in white, black and chrome.

New from Bodum were black matte rubber utensils with black matte metal.

New thermos bottles from Rosti come in various sizes.

Leifheit showed this fold-up box made of corrugated polyurethane.

Tefal's electronic kitchen scale was one of several electronic models introduced in Frankfurt.

## Romancing Russian Crafts

My trip to the Soviet Union turned into such a serendipitous experience that I would like to share some of it with you (even if it is a little removed from bridal merchandising).

I managed to see the porcelains on exhibit in the Hermitage Museum, gathered considerable information about arts and crafts and developed an appreciation for the vastness and cultural heritage of the country.

Many people, by the way, think of Russia as the U.S.S.R. Although Russia is enormous and accounts for 52 percent of the Soviet population, it is only one of 15 republics that extend through 11 time zones. The population of 262.5 million people is made up of more than 100 ethnic groups, each with its own language in addition to Russian.

All of the republics have a constitution of their own that conforms to the national constitution, but also takes

account of each republic's specific cultural features.

Moscow, the capital, has a population of 8 million people and is growing by 100,000 people yearly. The word Kremlin, as we know it, refers to the citadel of Moscow, housing the offices of the Soviet government. Kremlin means fortress and all the old Russian cities have their own "kremlins."

There are many beautiful churches within the Moscow Kremlin and among them is the Cathedral of the Assumption of the Virgin, completed in 1479 and the mother church of Russia. Russian churches contain many icons, which have become a national art form.

Folk art and crafts constitute one of the best records of the life of the multitudes of people before the 1917 revolution. In the past, the objects

#### Moulinex kettle

The brief for the design of this Contour kettle (top left) included a fixed top with integral handle and filling through the spout. A range of models was required from a simple automatic to a version with temperature indication – all making use of common injection mouldings. Models were an important part of the design process for evaluating ergonomic aspects such as handle comfort and the overall appearance. Four designs were developed for market research and the preferred concept was then developed to detailed layout drawings and final models. Industrial design was by Robin Chu and modelmaking by IDM.

#### Fibre optic inspection device for Prior

This product (above) is used for inspecting fibre optic cables during their installation and maintenance. Various design alternatives were generated using sketches and foam models. The final design is pistol-shaped for one-handed use, with batteries in a compartment in the handle. The focussing knobs and illumination button are recessed

Stoddard and Martin Darbyshire, mechanical engineering by Charles Ash and modelmaking by IDM.

#### Line condition monitor for Claude Lyons

This product (top right) was designed primarily for use in the computer environment, although it is equally suited for power line monitoring in all sectors of industry. The client's manufacturing facilities are geared to sheet metal fabrication

forward. To overcome the limitations of sheet metal, graphic elements were introduced on the top surface to enhance the appearance as well as structure the functional elements.

Keyboard and printer can plug together to form a single entity.

Industrial design was by Hedda Beese and modelmaking by IDM.

#### One Per Desk for ICL

The first product of its kind, the desktop computer (above) provides not only personal

transmission. The aim of the design was to create a compact, well structured and integrated unit. The design was taken from initial concept models via fully detailed appearance models to soft tooling using CAD/CAM facilities at Ronningen in Kalamazoo, USA. For ease of automated assembly all keyboard components snap together and only two screws are required to secure the VDU chassis to the housing.

Industrial design was by Hedda

di Jeffrey Newman

Si sa che l'Australia è un paese «giovane». Prima del 1945 la produzione industriale si basava essenzialmente su strutture commerciali con un elementare grado di meccanizzazione. La produzione avveniva solo per il mercato locale. Nei tardi anni '40 l'Australia stava per intraprendere per la prima volta — ad esempio nel campo dell'industria automobilistica — la produzione su vasta scala. Da tempo esistevano un'industria pesante e una produzione di articoli per la casa, ma non una produzione di massa.

Un incentivo all'industria venne dalla politica governativa, che sovvenzionò e incoraggiò la produ-

economico degli anni '50 e '60 non fu data sufficiente enfasi al design industriale e alla qualità dei prodotti. Gran parte della nuova capacità produttiva interna era nelle mani degli americani e degli inglesi, che imposero i propri modelli e il proprio stile sul mercato australiano.

Qualcuno vide il pericolo insito nel non sviluppare un'identità e una capacità nazionali nel progetto e nella produzione. Così, nel 1957, fu costituito l'Industrial Design Council of Australia (IDCA) per incoraggiare i produttori a perseguire i massimi livelli di qualità e originalità progettuale.

Chris Hansen, Canberra School of Art,  
«Dressing Mirror», in legno.

manufacturing followed, but conditions of the 1950's and emphasis was put on good high quality, and too much on output for an indiscriminate Sharp minds saw the danger national identity and national manufacture. So, in 1957, the Council of Australia (I.D.C.) encourage manufacturers to standards of design originality their products. It was hoped would encourage development products which could be exported world thereby developing Australia. This remains the

Johannes Kuhn, Canberra School of Art,  
«Teapot» in ottone argentato e alluminio.

L'obiettivo era che i produttori favorissero lo sviluppo di prodotti nuovi che potessero essere esportati in tutto il mondo, creando così nuovi mercati per l'Australia. Questo è ancora oggi l'obiettivo dell'IDCA. Esistono alcune industrie che con la loro capacità inventiva hanno saputo superare i problemi generati dalla distanza dei mercati di esportazione e produrre beni di alta qualità internazionalmente riconosciuti. Ormai i produttori riconoscono nella qualità del progetto uno dei fattori determinanti del successo commerciale sia sul mercato interno che su quello d'oltremare. Esistono ad esempio nuove industrie che sviluppano una sofisticata tecnologia (microelettronica). Oggi anche queste industrie si stanno facendo strada in un mercato esterno dominato dal dopo-guerra in poi dalle società straniere.

■ According to a popular cliché Australia is a «young» country. Just how young can be demonstrated by reference to the history of manufacturing in Australia.

Pamela Fuayne, Canberra School of Art,  
«Cake Knife» in acciaio e resine poliesteri.

Prior to 1945, production was essentially based on trade shops with degrees of mechanisation. Production was only for the small home market. In the late 1940's as Italy's manufacturers were recommending mass production Australia was about to embark on volume production for the first time — for example in the motor car industry. Australia has always produced heavy engineering products, as well as domestic products, but not on a mass scale. The incentive to manufacture came from government policy which subsidised and encouraged import replacement, producing more of the products Australia traditionally imported from elsewhere in the world. Growth in

zione locale di quei prodotti che tradizionalmente il paese importava dal resto del mondo. La grande immigrazione di quegli anni fornì da una parte la mano d'opera e dall'altra il mercato. Ne conseguì

Robert Foster, Canberra School of Art, «Lidded Container» in alluminio anodizzato e resine poliesteri.

Mark Newson, Sydney  
«Compass Chair» in alluvio

to this day. The idea that a small country could compete in the world has often presented a mental barrier to Australian manufacturers.

## STERLING/84

JC-K

PAGE 193

Sleek elegance marked the winners in the 15th Sterling Design Competition sponsored by the Sterling Silversmiths Guild of America. This year, 169 entries produced 10 award winners, a special prize for best flatware and 51 pieces chosen for exhibition.

The contest included a number of prizes. SSGA presented a total of \$3500 to designers of the 11 top pieces, including a special prize of \$750 for the flatware winner. The Gustav H. Niemeyer Memorial Educational Fund presented \$1750 to the metalworking departments of design schools represented by the winning students. Five mining companies—ASARCO Inc., Callahan Mining Corp., Coeur d'Alene Mines Corp., Hecla Mining Co. and Sunshine Mines—reimbursed all entrants for a portion of the cost of the sterling in their designs. In addition, a grant from the Silver Institute in Washington, D.C., brought the top six award winners an engraved 10-oz. ingot of Idaho silver and an expenses-paid trip to Wallace, Idaho, to participate in special ceremonies marking 100 years of silver mining in that state.

Judges of the 1984 competition were Jamie Bennett, Professor of Art, Boston University; Kurt Matzdorf, Professor of Art, State University of New York, College at New Paltz, and Frank R. Perry, vice president and director of design, Oneida Silversmiths.

*Silver hand mirror (fourth place) expresses designer Heather N. Williams' interest in architecture.*

*Claire Sanford placed fifth with a cordial decanter and two cups. They're from a series of vessels that are "somewhat human in appearance...and related to spotted dogs."*

*Saki serving pitcher (second place) was inspired by designer Lee Boroson's interest in Oriental art. It's designed to be used by two people.*

# STATEMENTS IN

PAGE 192 JC-K

Five-piece place setting of sterling wire and baked enamel flatware brought the special flatware prize to John E. Horn.

Kye-yeon Son took third with a liquor decanter and four cups. Son used a folding method, much as Orientals do with Origami; twisted wire provides an accent.

Designer Mark E. Fortune describes his first-prize winning teapot as "streamlined and flat," with a high-tech look.

INDUSTRIAL DESIGN

PAGE 69

herself . . . and at the same time camouflaged her pain."); an autobiographical look at Canadian François Dallegret's work (sexist slides of nude women alternating with examples of his visionary work); and Alberto Pérez-Gómez's talk on architecture in contemporary times (the "broken cosmology" of the design profession).

By the end of the week, a somewhat clearer image of our neighbors to the north and south had begun to emerge; many quaint folkloric images had at least been done away with and someone even noticed that Aspen was located almost equidistant from each of the countries' capital.

By the end of the week . . . many quaint folkloric images had at least been done away with, and someone even noticed that Aspen was located almost equidistant from each of the countries' capital.

distantly from each of the countries' capital. With the themes of the previous design conferences as a guide, this conference had attempted to look at its subject in the broadest possible sense: the design of the world we live in, and the design of our own lives within that world. This year's conference was no different from most in that the *real* action took place outside the tents and lectures where people of very different sensibilities sat down with each other and shared sun, iced tea and ideas.

Even in a conference

such as this—when have you ever heard of conferees discussing the printing of T-shirts saying "I survived Aspen '84"—the trip was well worth it for most. Part of a proud tradition of Aspen conferences, this year's version struggled to reach the level of excellence of previous years. Perhaps had it been entitled "Hot and Cold, Icy and Spicy" or some other less ponderous tag than "Neighbors," conferees and Aspen board members alike would have given it the critical push it needed to turn good subject material into compelling talks, discussions, exhibitions and seminars.

That not done, particularly towards the end of the week, enthusiasm shifted towards next year's conference chaired by Jerome Letvin of MIT, and tentatively entitled, "Illusion is Truth." This, conferees agreed, at least sounded interesting. It should also act as quite a complement to the 1985 International Council of the Society of Industrial Designers' World Design conference in mid-August, 1985, whose theme is "Realities and Aspirations."

—Patricia Leigh Brown and Steven Holt

### Reading tea

"Design in the Service of Tea," the exhibition of teapots and tea-related accoutrements on display at the Cooper-Hewitt Museum, (New York, until October 28), serves not only as a micro-history of the decorative arts and industrial design, but also as an introduction to the ceremony of "taking tea." Presenting an enormous variety of objects, the show was organized by curator David McFadden to dispel any image of the teapot as a simple domestic object. Alongside the pots, cups, caddies, spoons, infusers, sugar bowls, cream jugs and hot water urns, the exhibition includes examples of tea-related furniture, manuals, advertisements, paintings and prints of tea parties. A simple refreshment has indeed had impact on ob-

ject-making and the world at large.

The variety and quantity of pots in the show suggests that the teapot, like the townhouse or the chair, is one of those items which continuously recurs as a design problem. Developed in China in the 16th century as a vessel for steeping tea leaves, the teapot found its way to Europe almost immediately following its development. Originally taken medicinally, tea became a fashionable exoticism in Enlightenment salons where it served as the focus for convivial gatherings.

Despite persistent efforts of later generations to develop and improve upon the teapot, its basic shape has proved remarkably resistant to change. One need only examine a sixteenth century blue and white Chinese pot, a

**Coffee-On-Demand™**  
Fresh, hot coffee.  
All day long.  
No plugs.  
No re-heating.  
No kidding.

The Coffee-On-Demand Thermal Maker/Server is a whole new way of thinking about coffee. A way to make it (the popular drip-filter way). And a way to serve it—all day long without cruel re-heating. Your coffee stays fresh — and hot — for 8 hours or more! Once you've tasted your coffee with the Coffee-On-Demand system — and then tasted it again, and again, all through the day — every other coffee-maker-server you've ever tried can be retired to the back shelf. No kidding.

MARCH, 1983

Tea's Up MARCH, 1983

People who get so annoyed by that unhinged lid which keeps falling off the teapot when pouring, could easily fall in love with a teapot a Hong Kong manufacturer has made.

Unlike conventional teapots, the handle of this pot is located on top for easier handling while the lid is slanted at 45 degrees to the flat base of its ball-shaped body. The spout is so designed to prevent dripping.

The unique design of this teapot is patented in Australia, Britain and the US. (p. 239)

Made of stainless steel, it holds enough for six cups. This teapot is available alone or together with matching creamer and sugar bowl. For the solitary drinker, a smaller pot holding two cups is also available.

## Filtered Coffee by the Cup

HONG KONG  
ENTERPRISE

or those who enjoy making their own cup of French-style, filtered coffee, Café Phin (Vietnamese for filtered coffee, or café filtre in French) from Hong Lin Metal Manufactory is most handy and makes the operation easy. Café Phin, which makes coffee by the cup, comes in four parts: The drip pot with its own screw-down, perforated lid; the drip pot holder which fits over the cup, and a larger lid which fits over the drip pot.

to make a cup of coffee, just take the inner screw-down lid and put the ground coffee. Screw it back and set the drip pot into its fitted holder over a cup. Then pour in boiling water. To regulate the speed of the filtering process and therefore strength of the coffee dripping into a cup, simply screw down the screw-like inner lid or loosen it.

For more information about the stainless steel Phin contact:  
Hong Lin Metal Manufactory,  
in Wan Industrial Building,

Block C, 5th floor, 60 Chun Yip St.,  
Kwun Tong, Kowloon, Hong Kong.

Scandinavian-style kettles and jugs, as does the younger Myodo Company. The usually undistinguished plastics tableware of Yamato Chemical has a virtual monopoly of Japan's cheap tableware market. The kettle launched by the smaller Toshin Press in 1976 is robust and practical, but a long way from establishing Toshin as a force for Japanese design in the international marketplace.

These are the sort of goods which dominate the tableware and kitchenware sections of Tokyo department stores. And then, in the Matsuya store, tucked away by the wall, is a section marked 'Japanese-style ware'. Here are small teapots, cups and saké jugs, direct descendants of the old folk-craft ware. Factory-made and reasonably cheap, they lack the rugged and individualistic charm, but preserve the marvellous economy and clean lines, of the traditional ware. Though immensely popular, their influence on the 'Western-style' ware is almost nil.

Things probably won't improve till Japan's tableware and kitchenware designers gather the confidence to let the two traditions fertilise each other. Sori Yanagi, industrial designer (and son of the Folk-Craft Movement's founder) showed the way in the 'fifties, notably with a handsome kettle designed in 1953. Can

⑪

AUGUST, 1982

European silverware, gave it an outlandish, exotic appearance which was strongly appealing. Yet the spout is the same 'heron's neck' that is to be found on the traditional iron kettles. Another Nasu kettle of the period, whose like is still to be found in many Japanese homes, indicates the powerful momentum possessed by traditional forms, even in the teeth of unsympathetic technology. The kettle's proportions, and the shape of spout and handle, are almost identical to those of the traditional kettle. The traditional curve of the body, however, could not be duplicated by the press: its profile is gracelessly squared off.

Kobayashi Industrial, a company

# EMPTY VESSELS

Mugs, jugs and kettles: items as personal and portable as any of the electronic wizardry in which Japan excels. But, says Peter Popham, Japan's tableware industry is in the doldrums

There is a paradox in Japanese design today. In fashion, consumer audio and auto design, sectors in which Japanese involvement stretches back barely beyond the end of the War, a vigorous and influential design identity has begun to be fashioned.

Ceramics, by contrast, have a long history in Japan. Their influence on early Western industrial ware and on the craft pottery of this century has been huge. Yet most present-day Japanese kitchenware and tableware designers seem able only to limp along on the skirts of the Scandinavians. American company Fitz & Floyd, for example, which does much of its manufacturing in Japan, has its ceramics designed either in Dallas, or by the two US designers it has despatched to Japan.

With certain exceptions, these are conclusions suggested by a fascinating exhibition of pouring vessels old and new, recently held at the Craft Gallery of Tokyo's National Museum of Modern Art.

Toyojiro Hida, the gallery's curator, divided the exhibits into four sections: folk handicrafts, works of art by craftsmen, craft designers' works, and industrial products. The continuity of the pouring theme, from the old, hand-made country vessels of the first section to the aluminum and stainless steel of the last

the new, machine-made ones.

The Japanese have been pouring things for a long time: notably from kettles, beaten by hand from single sheets of iron, exquisitely decorated with relief designs with graceful spouts and high splayed handles; and from bamboo-handled teapots, ancestors of the crafty 'Japanesey' ones available everywhere. There are also vessels for which the West has no equivalent: small 'kyusu', teapots for green tea with handles projecting from the sides; lacquered wooden pots for broth and hot water; tiny soy sauce pots; saké jugs and broad, open kettles in which the saké jugs

Purely historic ware? Not so — its like is to be found in use in many Japanese homes today.

(1) Nineteenth century Nambu iron kettle by Takayasu Fujita; (2), (3) kettles made by Nasu Aluminium in the 'twenties; (4) soy sauce bottle and saucer by Rosanjin Kitaoji, 1951; (5) kettle by Sori Yanagi, 1953; (6) hammered iron saké warmer by Toshio Ito, 1966; (7) Seto ware teapot by Rosanjin Kitaoji, 1955; (8) kettle by Kobayashi Industrial, 1975; (9) kettle by Toshin Press, 1976; (10) water jug by Yamato Plastics, 1976; (11) teapot by Myodo, 1978; (12) soy sauce bottle mass produced by Hakusan Porcelain, 1979

P. 30  
AUGUST, 1982

Yanagi, founder of Japan's Folk-Craft Movement, issued his plea that the naive beauty of the products local to each region be properly valued, it was already far too late: mass-produced ware, still perfectly 'Japanese' in form had superseded them. Yanagi's followers, potters such as Shoji Hamada, produced work which, however faithful to the Folk-Craft spirit, was unrelated to the aspirations, and way beyond the budgets, of the ordinary Japanese.

At about the same time, the Nasu Aluminium Factory imported Japan's first aluminium press (from France) to make kettles. In these, the groping towards a

# For the Gourmet Hostess

### Southern Style

New Orleans line of porcelain-on-steel cookware includes covered casseroles in three sizes at \$38 to \$52 retail. From Austrian Gourmet & Table Ware Inc., Chicago, New Orleans is available in a full line

of cookware as well as dinnerware in sets and open stock. A 7-piece set of the floral-patterned cookware retails at \$160; five-piece place settings, \$40.

### Bands Underglass

Marsh Industries, Los Angeles, has added underglass blue, yellow and wine bands to seven of its French Chef white porcelain items. The line features a 2-quart souffle, 9½-inch quiche, oval casserole, individual casserole, set of four

ramekins, set of four quiches, and set of four everything. Retail prices range from \$12 to \$25. Delivery is scheduled for June.

Also new from Marsh is a line of ceramic items with copper servers and brass handles.

There is a tureen, baker, quiche and round and oval casserole. Items will retail for between \$40 and \$45 and will be shipped in July. The baker, casseroles and a set of three canisters are also offered in ovenproof glass with copper.

### Stoneware Set

Buckwheat, a 10-piece stoneware coffee set from

Gailstyn Co., New York, retails at \$35. The serving pieces

have speckled glaze with wheat design decal.

### Rapid Brew

New non-electric drip coffee-maker from Tops Manufacturing Co., Darian, Conn., carries a full margin retail unit

der \$15. Called Rapid-Brew, the hand-held unit has permanent plastic coffee filter and unbreakable metal bowl.

Vandor, San Francisco, has introduced the Vandor Country Collection in ceramic and enameled tin with pig, cow, chicken and sheep designs. Sets of four ceramic mugs and sets of four ceramic plates are packaged in four-color boxes and retail for about \$20. The enameled tin trays and canisters carry a \$5 suggested retail.

### Cooking with Oil

Stainless steel, brass covered oil can from Mark Louis Co., Mamaroneck, N.Y., is designed for storing and pouring cooking, salad or olive oil. The 23-ounce unit carries a \$20 retail.

plain items. The line features a 2-quart souffle, 9½-quiche, oval casserole, individual casserole, set of four

# Revere Ware.

**They last so long  
we made their  
beauty timeless.**

The beauty of Revere Ware tea kettles is as long-lasting as their performance and durability. Some are styled with the warmth and charm of the 18th century. Others will always be as contemporary as tomorrow. All are expertly crafted to give you years of enjoyment whether you use them every day in the kitchen or simply to add a decorator touch to your home.

# FROZEN STIFF?

It's 10° outside . . . Even getting colder. So you bundle up in layers and layers of heavy clothes. First with long underwear . . . then bulky, restrictive thermalwear on top.

Oh, you were warm all right. Like in a Turkish bath. Because you began to perspire from all your activity. And perspiring in that mountain of clothes is like perspiring in a plastic bag! The perspiration is locked in. So there you are. Wet and miserable.

But now, at last, Damart has solved the problem. Because Damart invented underwear that keeps you *warm, dry and comfortable* no matter how cold it is or how long you stay out. Underwear that's soft and light so you can move easily. Underwear that *lets the perspiration evaporate through* so you always stay warm and dry next to your skin.

Damart does this with a new miracle fabric—Thermolactyl. It not only retains and reflects your natural body warmth, it's knitted to let *perspiration out!* Nothing else does this like Damart. Damart Thermolactyl is so comfortable that the Mount Everest climbing expedition wears it. So does the Glen-coe mountain rescue team and the entire Chicago Bears Football Club.

Our free color catalog tells the full Damart Thermolactyl story and displays the whole Damart line for men and women. Send for your **FREE** copy now!

perform any of the tasks. This policy has the advantage of making the work more varied and more interesting and giving each member of the workforce a close involvement with the end product.

Mellor is, more or less, a self-taught manufacturer. He cut his production teeth on the Provençal Rosewood range, followed by Provençal Black, Chinese Ivory, Chinese Black and more recently a less expensive, more everyday range called Java. 'It wasn't until we got to Java that we got most of the production problems sorted out.'

The look of Chinese Ivory is, like his other ranges, irretrievably bound up with the manufacturing processes. The metal parts are 'blanked' out of flat strip steel and the design makes the most of this. For example, the knife blade is completely flat. The forming process displaces no metal whatsoever. This results not only in an unusual shape and form, but also enables the edging to be carried out by machine; something that would be difficult in a traditionally shaped piece.

Functionally, Chinese Ivory is both comfortable and efficient. Nevertheless, Mellor did not expect large sales. 'After all, it does look a bit unusual, rather different from what you get in the average large store.' However, perhaps tastes in cutlery are becoming more adventurous. John Lewis plans to stock it, having had a considerable success with the Provençal range in the past year.

Mellor has sold just over 4000 six-piece place settings since Chinese Ivory was launched. This is a solid achievement when one considers the scale of production (20 000 separate items per annum); the fact that it has been sold through only about 20 regular retail outlets, including his own excellent cutlery and kitchen equipment shop in London (a substantial amount is also sold through contracts to restaurants and hotels); and that it is a relatively expensive product. However, on the question of price, Mellor points out that no other British firm produces a comparable product, and imported cutlery with any similarity tends to begin at about £16-£18.

Mellor has invested some £80 000 in his production capacity, of which £6-8000 was accounted for by tooling for Chinese Ivory. 'Being new to production, we spend a large

**Designer:** Martin Hunt and Colin Rawson  
**Manufacturer:** Hornsea Pottery Company Ltd, Hornsea, Yorkshire  
**Retail Price:** tea set, 22 piece £35-80; coffee set, 17 piece £35-90

The 26-year-old Hornsea Pottery, founded by Desmond and Colin Rawson, established its prosperity with the production of glazed earthenware. But for all its excellent workmanlike qualities, one substantial disadvantage of this product is that when a piece of dark glaze chips off a pale base, the fault is obvious. Glaze knocks tend to occur between the glazing and firing process and may result in a high proportion of 'seconds' which have to be thrown out.

Colin Rawson, who takes a

special interest in the technical development of Hornsea's products, set out to eliminate the problem in his spare time. 'It was a question not of eliminating the glaze but of using it only on the working surfaces, not on the vulnerable edges.'

But if all the non-working surfaces were to be without glaze, it was important to ensure that the body clay was fully vitrified to eliminate every last vestige of porosity. It also had to be finished in such a way that even without glaze it was attractive to handle and to look at. Colin Rawson experimented with polishing techniques and eventually produced a finish which in visual and tactile terms is reminiscent of smoothly polished stone.

'Vitramic', as this material

became known, was first used to make Hornsea's Contrast tableware (DESIGN 316/35). This was a design for everyday use which tested the basic capabilities of both material and processes. Concept makes much greater demands. The shapes are more complex; a pattern of fractionally raised, polished surfaces on the outside contrast with the glaze within. Rawson: 'Martin Hunt interpreted the technical concept in design terms 100 per cent.' And in Hunt's view, none of his contribution is lost in the production process. 'Normally the degree of craftsmanship that goes into the beginning of a manufacturing process simply isn't reflected in the end product. But this design, which is technically demanding, works because of a very high level of skill on the production line.' The principals involved in Concept's development worked out the problems alongside the production staff, so that by the time the product began to be manufactured its special characteristics were common knowledge on the shop floor.

Concept is more expensive than Contrast, but since it is also in a pricier market - 'definitely bone china league' according to Hunt - it is thoroughly competitive. At the moment it is being produced on a fairly small scale and as a result is only going into a few shops, but as soon as new facilities have been installed, Hornsea will systematically increase production.

# SILBER HAT VIELE GUTE SEITEN

Fortsetzung

Sie schon, daß Silber in einigen Jahren immer mehr gebraucht wird? Der Silberverbrauch in der westlichen Welt betrug im Jahr 1974 fast 14 000 Tonnen. In der Welt wurden aber nur 9200 Tonnen erzeugt. Etwa ein Viertel der gesamten Silberproduktion wird für die Herstellung von Geschloß, Tafelgerät, Schmuck und kunstgewerblichen Artikeln verwendet. Fast ebenso wichtig ist die Fotoindustrie. Der Silberverbrauch reicht nicht aus, um die Nachfrage der elektronischen Industrie, Raumfahrt und Medizin zu decken. Deshalb müssen immer mehr Silber aus dem Verkehr genommen und auch Silbergeschmelzen werden. Der Silberpreis ist in den letzten Jahren ständig gestiegen. Im Jahr 1976 kostete ein Gramm Silber 350 Mark. Silber ist ein Metall mit vielen Eigenschaften. Drei Eigenschaften sind für Tafelgerät besonders wichtig:

Silber ist hygienisch, denn es tötet viele Bakterien ab. Silber verträgt die organischen Bestandteile der Speisen. Silber leitet Wärme und fühlt sich sehr angenehm an.

Silber ist ein Metall, das sehr weich ist. Es wird meist mit Kupfer zu einer Legierung verschmolzen. Am gebräuchlichsten sind die Legierungen 800, 835 und 925/000. 100 Gramm Sterlingsilber (925) enthält 925 Teile Silber und 75 Teile Kupfer. In anderen Legierungen ist der Kupferanteil entsprechend höher.

Sehr nobel wirkt dieser aparte Platzteiler aus Sterlingsilber. Der vergoldete Rand betont die achteckige Form. Oktogonale (achtgliedrige) Entwürfe

waren schon im frühen 18. Jahrhundert bei europäischem Tafelsilber üblich. Hersteller: Grimmering, Schwäbisch Gmünd. Preis 160 Mark

Birne und Apfel spenden bei Tisch Pfeffer und Salz. Dieses Set aus Sterlingsilber ist eine liebenswürdige Geschenkidee. Man kann es auch vergoldet bekommen. Hersteller: Hermann

Zeitlos ist die Kugelform an den Teekannen. Der Entwurf aus dem Jahr 1890 und ist heute unvergessen. Die Kanne wird aus Sterlingsilber

# Circa '76 leads the coffee revolution.

Mirro captures the colonial spirit in its new Mirro-Matic Circa '76 percolator. Your customers will love its traditional design of bright yellow, green or red polypropylene that won't chip, crack or fade during normal use. They'll also love its lock-on cover and extra-wide base. Percolator brews 4-8 cups of delicious coffee, and keeps it hot, automatically.

Get into the spirit of '76 with the Circa '76 Perk . . . and enjoy a revolutionary sales success.

... said that there was not enough space in a single floor at the Park Ave. location for his operation, which occupies 22,000 square feet.

However, Avakian was not upset over the possible new name for the building. "It's their building, they can do whatever they want with it. "Of course, I prefer to think that the center is where we do business (10 W. 33d St.) rather than anywhere else," Avakian said.

He also said "our real competition is with machine-made oriental limitations," and he's not against anything "that would promote the oriental rug business."

**PHILIP ATIYEH**, of Atiyeh Bros., another large importer, said at the firm was not contemplating move at the present time, and they had, as Avakian, recently signed a new lease at their present

area rug specialty stores have always been into it. Now it's here and we should be into it too," Berlin said.

Why did New York Carpet World select Hayim as its first source rather than a domestic manufacturer such as World, Deering-Milliken or Karastan?

"When smart people like World and Deering-Milliken are into area rugs, we should be there too. But World and Deering-Milliken offer only one type of thing. Hayim has more of an assortment and they're specialists in this business.

"We'll start with Hayim because he can put in a wide assortment. He also offers immediate delivery," Berlin said.

**BERLIN ALSO IS HEDGING** the firm's area rug success on the fall and Christmas selling seasons: "This is the time of the year to try it."

delve into tile sales.

Armstrong's Designer Solarian at \$16 a square yard installed has been the most popular sheet vinyl product for the specialty chain.

## *Fritz & LaRue Offers Middle-Price*

AT THE SOUTHERN MARKET — Fritz & LaRue, a high-end oriented area rug importer, has shifted its pricing to the middle range with a collection of new Indian-made Persian reproductions to retail at \$1,350.

The company, which is showing the lower-priced rugs here for the first time, has additional plans to penetrate the promotional market with a \$575 retail collection in Chicago next January.

This strategy was disclosed by

Scottdel makes prime and bonded urethane foam carpet cushion. It also manufacturers machinery used in the manufacturing of bonded carpet cushion.

Leslie Stroh, president of the company.

"We've always concentrated on the high-end," said Stroh, "but after January we're going to have a promotional line."

**HE SAID THE COMPANY** will continue pushing the \$2,700 9x12 business with high-end furniture stores, decorators and Oriental specialty dealers.

The \$575 line will be aimed at department stores, and the new \$1,350 collection will go either way.

The facility retailers and distribute Atlantic warehouse more carpet rolls. It eighth regional

There will be patterns initially collection. In addition several new Chinese upper price point

#### ORANGE BOX

Frank Heigh designed this orange and white plastics pencil box for Li-Lo Ltd. It is just coming into the shops and costs £1.05.

#### WARES WELL

A retrospective of Robert Welch's work was held at the Waterloo Place Gallery, London SW1 in August. The exhibits included examples of his silver, glass and stainless steel ware, together with his familiar enamel steel kettle (above) and cast iron casserole.

#### SLIDE CHANGE

The Spotlight Automatic is one of three new additions to Greens' range of Federal projectors. It has a 24 volt system, a 150 watt tungsten halogen lamp, remote control focusing and slide changing and a synchro socket for a tape recorder. It costs £34.95 from any of Greens' Leisure Centres.

#### THAT'S FLAT

Giorgio Tenani designed the Flectar office furniture range which is made by Interburo International. Each item is made in white formica and is folded up and packed flat during delivery and storage. Prices range from £53.29 for a machine table pedestal to £295.79 for a high cabinet. Dodson-Bull Interiors Furniture Division, 5-6 Old Bailey, London EC4 are the UK distributors.

## "TABLEWARE INTERNATIONAL"

Opposite page, a line etching of crystal trees from Daum. Top left, the new Zodiac mugs from Henry Watson's Potteries, white with a black underglaze pattern. Top right, the Coalport fine bone china avocado dish

Below, the Conica silver-plated coffee-pot, milk and sugar manufactured by Cohr Solvarefabrik, and brought to Britain by Swedanor. Designed by Hans Bunde, the handles are of black nylon

avocado dishes don't win the day then pasta jars will. Dartington, Courtier and Import Development all currently offer avocado dishes. Coalport has introduced its interpretation. CTC some time ago launched a version side-by-side with artichoke and corn-on-the-cob dishes. Either many firms are jumping on to a bandwagon or there is a boom in the avocado industry. Whatever the reason there is little doubt that they would make interesting presents. Other novel gourmet lines include an oyster dish in French porcelain from ICTC retailing at around £1.40 in the UK. Fondue sets are in fashion, and available in a wide price-range. Chomette has introduced a fondue set in the 'Pilivite' range

into Britain. This is in a presentation box and comprises six plates, fondue set and forks. In the sunny yellow Locarno pattern this set retails at approximately £27.50. Lashbrook Industries sport a Japanese-made fondue set with an attractively decorated stoneware saucepan which retails at £5.40. WMF has launched its new version which retails at £5.95 with an introductory offer. A carton of eight sets is invoiced for seven. Svensk Tableware, Scanware and Oneida Silversmiths among others displayed their sets at Harrogate. Presentation boxes of china-handled cutlery and cake plates have a strong Christmas appeal. Crown Staffordshire has introduced a new cheese knife

and pastry forks into the range. Royal Grafton also has a selection of similar items. Both firms supply ranges of boxed coffee cans and saucers. Mugs too are a popular item. Royal Grafton has added to its range of tankards several new patterns, game birds, steeplechasing and hunting. Rather exceptional mugs from Harold Oppenheim designed by Jorinde Binder were on display at Harrogate. The decorations inspired by Indian art forms are highly coloured yet pastoral in image. They retail around £2.75 each with or without handles. Zodiac mugs from Henry Watson's Potteries are being sold to the trade in packs of five dozen at a cost of £16.80, carriage paid, and are expected to retail at 45p

machine for the table by Brevetti Gerpi della ditta Cav Renato Giovani of Via S Donato 66/3, Bologna

Ergonomically-designed ultra-modern design in the called Linea was shown Via Adam, Casale Monf

## Ronson uses Melamine

These three modern table lighter bases were designed by Kenneth Grange for Ronson, incorporating the Varioflame gas fittings. They are

made of Melamine, which when moulded in bulk has the weight and surface hardness of porcelain without its chipping properties. Reasonably priced, they are both tough and attractive. The triangular Tricorn lighter in black Melamine costs £3 7s 6d, and the circular

Piccolo and the square Quadrille, both in white Melamine, cost £3 5s each. Kenneth Grange has also designed the packaging for the lighters. Each box shows a picture in view of the relevant pattern with elements on all four vertical sides, plus the word Ronson on the lid and base.

The range represents Ronson's first venture into plastics. Kenneth Grange, whose design work includes such diverse objects as typewriters, foodmixers, cameras, and clocks (see page 58), has also designed another lighter for Ronson, with a rosewood base.

## Return to earthenware elegance

After two and a half years spent on development, the Marquess of Queensberry and Roy Midwinter have come up with an entirely new

shape in earthenware china. The new MQ2, manufactured by W. R. Midwinter Ltd, is aimed at "the late 1960s" and the company feel that it is part of a general return to elegance and more feminine lines. The pattern shown here is called Pierrot, a cobalt blue on a white base; it was

designed by Nigel Wilde. Another pattern of dark and light blue flowers on white, called Columbine, is by Jessie Tail. The range is also available in plain white, and other designs will be added in the future. Various items are interchangeable: for instance the pots of coffee and tea-

pots, or coffee cream jugs can be used as sauce boats by adding coffee saucers. Prices are very reasonable. A 21-piece tea set costs £5 12s 6d, a 16-piece coffee set £5 7s 6d, and a 24-piece dinner set £12 17s 6d. All pieces can, of course, be bought individually.

3 Queensberry pattern on Midwinter tableware. Designer David Queensberry. Maker W. R. Midwinter Ltd.

4 Diabolo pattern on Astra shape. Pattern designer Alan Scott. Shape designer Tom Arnold. Maker the Royal Crown Derby Porcelain Co Ltd.

5 Cotswold shape for Duchess range of tableware. Designer Robert Welch. Maker A. T. Finney & Sons Ltd

6 Spode tableware, showing Apollo pattern on Royal College shape. Designers Neal French and David White. Maker W. T. Copeland & Sons Ltd.

7 Chevron shape for Derby range of ovenware. Designer Gill Pemberton. Maker Joseph Bourne & Son Ltd.

8 Hyde Park C912 pattern on Can shape. Designer Susie Cooper. Maker Susie Cooper Ltd.

9 Evesham 8000 pattern on Midwinter Stylecraft shape. Pattern designer Jessie Tait. Shape designer David Queensberry. Maker W. R. Midwinter Ltd.

10 Quatro tableware. Pattern designer Audrey Levy. Maker T. G. Green & Co Ltd.

11 Crinan mug. Designer Robert A. Stewart. Maker Robert Stewart Ceramics Ltd.

Among the new tableware patterns were 'Connaught', 'Golden Anniversary', 'Sonata', 'Bridal Lace' and 'Snow', all in fine bone china.

'Connaught' is patterned in green and gold and comprises a dinner, tea and coffee service and is reasonably priced for such a richly coloured pattern. On the Prince shape a feature of the new pattern is a specially designed new teacup.

As its name suggests 'Golden Anniversary' is edged with a golden garland of leaves and flowers, again on the Prince shape.

'Sonata', a contemporary pattern on the coupe shape, has a platinum edge complemented by a border of subtle grey swirls.

The delicate lace centre design of 'Bridal Lace' is in soft tone of pink, grey and yellow and is on a coupe

shape edged in platinum.

Now released for the home market for the first time, the aptly named, contemporary styled, 'Snow' - an undecorated coupe shape in pure white bone china - which has been extremely successful in the American market with brides and newly weds.

Royal Worcester's well-known 'Gold Lustre' fireproof ware appears in a new guise in a fluted design

Opposite: Royal Worcester's new Ledbury shape, a fluted design in fireproof ware. It is the latest version of Worcester's gold lustre fireproof ware which is now available in white as well as in gold and silver. Above left: 'Arab', the latest in the series of famous horses modelled for Worcester by

Miss Doris Lindner. Above right: Pieces from a colourful new range of cocktail sets decorated with vivid yellow anemones, red japonica and butterflies and designed by Miss Kathleen Hills. Bottom left: 'Golden Anniversary', a new bone china tableware pattern on the 'Prince' shape and

rimmed in gold. It features an intricate design of gold chasing. Bottom right: 'Snow', the undecorated coupe shape in pure white bone china which has been highly successful in the American bridal market and which Royal Worcester have now released to the home market for the first time.

Richard P. Bruning, Pratt Institute; a  
fruit bowl by Stephen Parisi, Pratt  
Institute; a handleless pitcher by  
Robert W. Downs, University of Illi-  
nois; and a creamer and sugar by  
Jack Pink, Cleveland Institute of Art.

sional in every detail.  
Now in its fourth year, the student  
design competition offers a young de-  
signer, fortunate enough to be a win-  
ner, a number of practical advan-  
tages, in addition to a generous mone-  
tary prize, such as recognition by in-  
dustry, a sterling silver model of his  
design as his personal property, full  
rights to his design if put into com-  
mercial production, and the publicity  
of coast-to-coast touring of his piece.  
This year's response to the competi-  
tion, open to all residents of the United  
States who are enrolled in a design  
course, was especially enthusiastic.

form for preliminary judging. I  
these sketches, eight finalists were  
lected. Their designs were then  
to silver manufacturers who went  
along with them to translate  
ideas into the finished silver pieces  
which were judged by David R. C  
bell, President, American Crafts  
Council; John S. Griswold, Gris  
Heckel & Keiser Associates, Indu  
Designers; and Austin Homer, I  
dent, J. E. Caldwell & Company.  
Winning designs, on exhibit at  
Museum of Contemporary C  
New York, from October 19 to  
ember 1, will tour the country in

## INTERIORS

DEC, 1960  
p. 100

Stephen Parisi, Pratt Institute, Sec-  
ond Prize winner, expands a tri-  
footed base into a free-form fruit  
bowl with gracefully curving sides.

Frank E. Peteroy, Pratt Institute, received an Honorable Mention for this unusual water pitcher which resulted from a study of the relationship of axes to surface planes and to each other.

Richard Preston Bruning, Pratt Institute, won First Prize with his "S" shaped combination teapot and coffee server. Free-flowing curves are in harmony with liquids vessel holds.

sure of good sales, he says, unless the pack, advertising and price stand up to consumer tests at conscious and subconscious levels. It is not enough for a designer to produce a beautiful pack – it must pass tests for readability, visibility, eye-movements, association and preference by potential consumers. Market research consisting of direct interviews will not give valid results since people often do not know, or will not admit, why they buy a product – tests must be made on an unconscious level to reveal true attitudes. Good advertising should not aim at strong impact and quick recall – the greatest effect of advertisements is on our unconscious mind which must be gently persuaded to buy the product.

Mr Cheskin's methods seem well supported by detailed examples of his tests and product case-histories. On the other hand, the book suffers from lack of illustrations and too much repetition – and he is writing only of the American market. But there is much to be learnt from it by those who are open-minded and concerned with better sales.

DOROTHY MEADE

### Wohnen heute 3

Editor Alfred Altherr, Arthur Niggli Ltd, Switzerland, Alec Tiranti Ltd, 16s 6d

This book is the Swiss equivalent of the *Decorative Art* annual, but whereas the latter is international, *Wohnen heute 3* is restricted to Switzerland, and is a catalogue of goods selected by the Schweizerischer Werkbund, the Swiss equivalent of the CoID.

It is remarkable that although limited to that small country, the contents in no way show a falling off of the standards set by the many countries represented in the British publication. This is obviously due to the Swiss passion for cleanliness, that comprises clean design in all its aspects, and applies not only to architecture, in which the Swiss have been outstanding for decades, but also to furniture, textiles, light fittings, household and office appliances.

The Swiss have long been known as creators of sound and lasting designs, eschewing merely modish superficialities and following conscientiously Sir Henry Wotton's celebrated principles of good building: "Commodity, firmness and delight" – in that order. The "commodity" is the result of the extra thought that goes into the design of all articles of daily use; the "firmness" is inherent in the traditional quality of Swiss craftsmanship; the "delight", decisively relegated to third place, is not always obvious at first sight in the severe simplicity of most articles shown in the book under review, but they are extremely 'liveable with'.

The "delight" is particularly notable in the household china and glassware. In the former, Heinz Loeffelhardt has been particularly successful in the various dinner and coffee sets he has created for the Arzberg, above, and Schönwald porcelain manufacturers, which could hardly be simpler or more pleasant in shape. Equally pleasing and graceful are his sets of glassware by A. F. Gangkofner. On the other hand, the largely square and straight-lined furniture included in the book may perhaps be deemed somewhat harsh and uncompromising by present-day standards.

As a whole, however, this very well produced book

Tableware designed in 1957 by Heinz Loeffelhardt for the Porzellanfabrik Arzberg (see *Wohnen heute 3*)

(whose letterpress, incidentally, is in German, French and English) is an encouraging sign that the modern idiom in design is not the creation of long-haired aesthetes, but represents a thoroughly practical and businesslike approach by thoroughly practical and businesslike men.

RENÉ ELVIN

### Interior design

Henry and Lilian Stephenson, Studio Books, £1 15s

This is a good book. In less than a hundred pages it describes the basic considerations and criteria necessary in designing a domestic interior. It is essentially a concentrated introduction to a wide subject, and it has all the advantages and drawbacks of quick, strong imbibing.

Short, to-the-point chapters deal with design approach, planning, materials, colour, furniture, method of presentation and related details. The text is convincing, rarely speculative, and wholly didactic in tone. Incredibly informative on many detailed elements such as flooring, fabrics, paints, etc., it is accompanied by relevant and understandable illustrations and drawings.

The fault of this book is the creditable one of attempting too much in too small a space. Those who come new to the subject will feel that here it all is at their fingertips, with such advice as... "indicate the dangers of clients wanting to change details" – "walls should be studied with the idea that they are backcloths to general furnishing" – "never use Portland cement with gypsum" – "light colours reflect light", etc.

The best chapter, on *Planning the Interior*, takes the reader step by step through the design of a modern flat. Dozens of ideas are thrown out for him to catch in the process, and the whole business is made to sound an exciting, stimulating vocation.

And of course it is. And it all sounds so easy. One has visions of lots of bright, polite young people applying for jobs during the next 10 years, and to the question "And where did you train?", answering "I was never at a school or in a studio – but I have read Henry and Lilian Stephenson's book".

**Dinnerware of plastic** is assuming a different character as it shakes off its picnic associations and becomes an element in gracious living. Lenox China's expansion into the field, with its new line of substantially-priced plasticware, is one sign that even the most traditional china manufacturers are recognizing the claims of the new material. In china, shapes range from the sobriety at left below to the extreme fancifulness of the forms at the far right of this spread.

**WESTINGHOUSE  
Coffeemaker**

Westinghouse Electric Corp.,  
Mansfield, O.

Device: Westinghouse 1000-watt percolator-type coffeemaker, No. PE-541.

**Selling Features:** Automatically brews 9 cups coffee in 9 min.; or as little as 2 cups at a time; features high velocity pumping action and a new type fully perforated basket; chrome-finished copper bowl and lid with plastic spreader instead of bubbler; wide-spaced handle and base of black phenolic plastic; settings from "mild" to "strong"; a signal light above control knob glows red when coffee is ready for serving; 2 thermostatically controlled heating elements—one 350 watts the other 650 watts—both operate for fast pre-heating of water then 650-watt element automatically cuts off; when coffee has been brewed to taste the 350 watt element cuts off and the 650 watt element cycles on-and-off to maintain serving temperature; a.c. only.

**G-E Coffeemaker**

General Electric Co.,  
Small Appliance Div.,  
Bridgeport, 2, Conn.

Device: G-E automatic coffee-maker.

**Selling Features:** Automatically makes from 2 to 9 cups percolator coffee in from 4 to 15-min.; once made coffee remains at serving temperatures indefinitely; and if disconnected it can be reheated without repercolating by setting the reheat control; also suitable for preparing instant coffee; its 800-watt unit speed-heats up to 14 cups instant coffee; brew selector provides mild, medium or strong coffee and "re-heat"; red indicator light signals when coffee is ready; cup markings are indicated on inside; safety-grip handle with special plastic guard against side; balanced for easy pouring.

# MIRRO-MATIC

## ELECTRIC PERCOLATOR

ESTABLISHED RETAIL PRICE **\$12.95** 8-CUP WITH CORD  
FED. TAX INCLUDED  
(West, 13.95)

● Did you ever promise a little girl a big, new doll? You'll see that same reaction when you promise this glistening MIRRO utensil in a premium deal.

There's so much here that a woman just can't resist. She's been sold on the MIRRO name for years... by constant national advertising, by her friends, by the MIRRO Aluminum in her own kitchen. She instinctively pictures MIRRO-MATIC's graceful beauty, just the way it would look on her dining room table. And she loves the idea of its *completely* automatic operation... MIRRO-MATIC starts perking in seconds, stops *automatically* when coffee is done, keeps it drinking-hot for hours.

All of this pulling power starts selling for you, the moment your premium plans include the MIRRO-MATIC Electric Percolator.

Write or wire for details.

# Market Survey: FRESH FROM HOUSEWARES FACTORIES THIS MONTH

Detroit  
Macoid

## Plastic Clothespins

Made by: Detroit Macoid Corp., 12340 Cloverdale Ave., Detroit.

**Selling Slants:** "Klipits" are clothespins molded of Tenite plastic. They are so designed that it is virtually impossible for garments to work loose from their grip. Have exceptionally smooth surface, will not snag or tear sheerest fabrics. Cannot splinter, chip or crack. Bright colors make them easily discernible. Have 3 prongs, two going on one side of line and garment, and one on other side.

Retail Price: 25c dozen.

HOUSE FURNISHING REVIEW (Housewares)

## Scrub Pail Dolly

Made by: Patent Novelty Co., Fulton, Ill.

**Selling Slants:** Dolly consists of metal platform, 13 1/4" high and 10 1/4" in diameter, mounted on 4 easy-rolling casters. Pail sets securely on platform and a gentle push moves it to any part of floor without marring surface.

HOUSE FURNISHING REVIEW (Housewares)

## Foot, Leg & Back Rest

Made by: Fos-Burn Mfg. Co., 6523 Euclid Ave., Cleveland.

**Selling Slants:** "Kumfy-Stool" is an adjustable home necessity usable as a foot, leg or back rest and also adaptable as one-legged table or seat. Comes in maroon or white wrinkled japanned finish with cushions of Spanish moleskin, 1 1/2" thick. Weighs only 6 lbs.

Federal  
Tool

## Neoprene Household Gloves

Made by: Hood Rubber Co., Watertown, Mass.

**Selling Slants:** Lined household gloves made of neoprene, du Pont rubber-like synthetic, have suede finish that assures firm grip. Gloves are produced by giving an even coat of neoprene to lightweight flannel gloves. They are intended for use in gardening, dishwashing and other household tasks. Said to be completely water resistant, long-wearing, resistant to grease, vegetable oils, cleaning fluids and effects of sunlight and heat. Gloves are easily slipped on and off. Made in gun metal with flesh-toned lining in 4 sizes from 6 1/2 to 8.

Retail Price: 95c.

HOUSE FURNISHING REVIEW (Housewares)

Met-L-Top

## Cake Plate & Sandwich Tray

Made by: Marlon Mfg. Co., 37 E. 21st St., New York.

**Selling Slants:** "Ritz" chrome cake cover and sandwich tray combination features dome shaped, triple-chromed cover in usual design. Crystal glass platter is 13 1/2" in diameter; cake cover is 11 3/4" in diameter by 5" high, is trimmed with walnut knob.

Retail Price: About \$1.00.

## Enameled Steel Ironing Table

Made by: Met-L-Top Tables Inc., Milwaukee.

**Selling slants:** White enameled steel ironing table, fireproof and warpproof, weighs one pound more than average ironing board. Top of table is perforated on 2" centers to permit escape of heat and steam of ironing and keep ironing pad dryer. This is said to hasten ironing operation and reduce wear on laundry. Top is particularly adapted to new steam irons. Construction is metal throughout, without bolts or screws. Legs fold automatically, collapse table into package 3 1/2" thick. Optional is an elastic-edge ironing pad and a sleeve table also with ventilated metal top. Now in production is electric model ironing table with 400-watt element built into channels of table top to speed ironing by providing heat from below. Connections permit plugging iron into table jack.

Retail Prices: Table, \$5.95; pad and sleeve table, each \$1.00; electric table, \$9.95.

HOUSE FURNISHING REVIEW (Housewares)

## Mirro Whistling Tea Kettle

Made by: Aluminum Goods Mfg. Co., Manitowoc, Wis.

**Selling Slants:** Aluminum whistling tea kettle has large Bakelite handle fitting hand perfectly. Attractive whistle on spout slides to side for easy filling and pouring. Utensil has wide, extra heavy, welded flat bottom designed for top efficiency on gas or electric ranges.

Retail Price: \$2.95, higher south, west.

# NOW ON RECORD

***How the Index of American Design is making a painstaking pictorial survey of the American decorative arts***

In twenty-eight states trained artists, directed by supervisors and assisted by research workers, have produced more than seven thousand drawings, a selection of which you see reproduced in the preceding and following pages of this issue. These are the artists of the Index of American Design, a part of the Federal Art Project, under the Works Progress Administration.

The purpose of the Index is threefold: to record American objects in the decorative and useful arts which heretofore have not been studied or which, for one reason or another, are in danger of being lost; to gather together a body of traditional material which may form the basis for an organic development of American design; and to make usable source-records of this material for the benefit of artists, designers, manufacturers, museums, libraries and art schools. To this end there will be a publication in portfolio form of selected drawings. In the meantime the Index material is made accessible to the public in exhibitions.

The task of recording pictorially the Arts of America's past from 1620 to about 1880 led the Index artists to search museums, historical societies, private collections, attics, warehouses and even abandoned buildings. And although many articles recorded in old documents had completely vanished, numerous objects were found before they had been effaced by time. They have been drawn in color and in black and white.

Then came the challenge of reproducing, accurately and painstakingly, such things as chairs and

dishes, costumes and quilts which play an important part in the telling of a nation's history. In some cases where certain effects of textures are involved, a special technique was adopted, using scratch board, a prepared chalk drawing board with a wax surface.

In this scratch board technique, developed by the Index of American Design, the glossy surface is removed with talcum powder and the pencilled drawing of the object transferred to the chalk board. A water color tone is then painted over it and scratched off to give the desired tone. This method eliminates the necessity of using white paint for highlights on brass, silver and even on glass.

At the same time a vast amount of research work to supplement each drawing with period, style, maker, material, and other data, serves as a framework for the record of American Design. With such a collection the artist, designer, and manufacturer in the United States can build upon the heritage left them by craftsmen of the past, and the public will become conscious of its own art traditions.

Drawings and photographs in this issue were chosen from divisional projects of the Index of American Design in California, Connecticut, Delaware, Florida, Illinois, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New Mexico, New York, Ohio, Pennsylvania, Rhode Island, Utah, Vermont, Virginia, Washington, Wisconsin.
